

C-Madong Target Users Document

User Personas, Research Insights & Opportunity Areas

Version 1.0

February 21, 2026

Author: Khaoklong (Product Designer)

Status: Draft

Table of Contents

Executive Summary

C-Madong serves a diverse ecosystem of four primary user types within Chulalongkorn University dormitories:

User Type	Primary Role	Key Motivations	Pain Points
Students	Dorm residents	Convenience, staying informed, quick issue resolution	Disconnected communication channels, manual processes
Staff	Daily operations	Efficiency, visibility, task management	Information silos, manual tracking
Admins	Strategic oversight	Data-driven decisions, control, oversight	Fragmented data, lack of analytics
Committee	Student representation	Advocacy, bridge between students & admin	Limited access, delayed information

Key Insight: All user groups suffer from fragmented communication and manual processes. LINE is the unifying platform—everyone already uses it daily. The opportunity is to create a unified digital layer that streamlines operations while meeting each user type where they already are.

Target Audience Profile

Demographic Overview

Students (Primary Users)

- Age: 18-25 years old
- Education: Undergraduate and graduate students at Chulalongkorn University
- Tech Literacy: High—smartphone-native, active social media users
- Devices: Primarily mobile (Android/iOS), some laptop use for academics
- Language: Bilingual (Thai native, English proficient)
- Dorm Population: ~1,000-2,000 residents across multiple buildings

Staff (Operational Users)

- Age: 25-55 years old
- Roles: Dorm managers, maintenance technicians, administrative staff
- Tech Literacy: Moderate—comfortable with mobile apps, prefers simplicity
- Work Environment: Mobile (walking around dorm), desktop (office tasks)
- Language: Primarily Thai
- Team Size: ~20-50 staff members

Admins (Strategic Users)

- Age: 30-60 years old
- Roles: Dorm heads, facility managers, university administrators
- Tech Literacy: Moderate to high—comfortable with dashboards and reports
- Work Environment: Primarily desktop/laptop
- Language: Bilingual (Thai/English)
- Team Size: ~5-15 administrators

Committee (Student Representatives)

- Age: 19-24 years old
- Roles: Elected student representatives, dorm committee members
- Tech Literacy: High—digital native
- Work Environment: Mobile-first, some desktop
- Language: Bilingual (Thai/English)
- Team Size: ~10-30 committee members

Psychographic Profile

Student Psychographics

Trait	Description	Design Implication
Gen-Z Identity	Digital native, values authenticity, expects instant responses	Real-time notifications, mobile-first, fast loading
Social Connectedness	Strong peer networks, FOMO, values community	Social features, announcement visibility, peer visibility
Convenience-First	"Path of least resistance" mindset	LINE Login (no new passwords), minimal forms
Visual Learners	Prefer images/video over text	Visual Flex messages, photo uploads for maintenance

Staff Psychographics

Trait	Description	Design Implication
Task-Oriented	Focus on getting jobs done efficiently	Clear workflows, minimal clicks, status tracking
Mobile Workforce	Often away from desks, in the field	Mobile-optimized admin features, offline support

User Personas

Persona 1: Nam (Student - Year 2)

Profile:

- Name: นามสุวรรณ (Nam) — นามสุวรรณ จงใจกลั่น
- Age: 19 years old
- Year: 2nd year undergraduate, Faculty of Engineering
- Dorm: U-4, 2nd Floor, Room 205
- LINE Usage: 8+ hours/day, 50+ friends, active in multiple group chats

Bio:

Nam is a typical Gen-Z student who lives on her phone. She's active in student clubs, studies hard, and values her social life. She's comfortable with technology and expects things to "just work." She often misses dorm announcements because they're posted on physical bulletin boards she rarely checks.

Goals:

- Wants to report a broken air conditioner quickly without walking to the office
- Needs to stay informed about dorm events and payment deadlines
- Hates carrying physical cards—wants everything digital
- Wants to track when her maintenance request will be resolved

Frustrations:

- Why do I need to fill out a paper form to report something broken?
- I never check the bulletin board—I missed the payment deadline again
- I don't know if my repair request was even received
- Why so many different apps and systems for everything?

Quote:

"แค่อยากแจ้งซ่อมแอร์เสีย ทำไมต้องเดินลงไปเขียนกระดาษ? ใช้แอปได้ไหมมัย?"

("I just want to report a broken AC. Why do I have to walk to the office and fill out paper? Can't I just use an app?")

Persona 2: Auntie Malee (Staff - Dorm Manager)

Profile:

- Name: คุณมาลี (Auntie Malee)
- Age: 48 years old
- Role: Dorm Manager, U-4 Building
- Experience: 15 years managing dormitories
- Tech Comfort: Moderate—uses LINE, Facebook, basic office apps

Bio:

Auntie Malee has managed U-4 for over a decade. She knows every student by name and takes pride in creating a welcoming environment. She's overwhelmed by paperwork, manual tracking, and constantly walking between the office and dorm rooms. She cares deeply about students but struggles with the administrative burden.

Goals:

- Wants to respond to student issues quickly
- Needs to track which technician is assigned to which ticket
- Wants to broadcast announcements to students without formatting issues
- Needs to know which rooms have ongoing issues for follow-up

Quote:

"น้องๆ เมนท์มาหาผมตามไลน์ตลอด ก็ช่วยอะไรไม่ได้ เพราะไม่รู้ว่าเป็นช่างที่รับผิดชอบห้องนั้นๆ"
 ("Students message me on LINE all the time, but I can't help because I don't know which technician is responsible for that room.")

Persona 3: Dr. Chai (Admin - Dorm Head)

Profile:

- Name: Dr. ชัยวุฒิ (Dr. Chai)
- Age: 54 years old
- Role: Head of Dormitory Management
- Experience: 10 years in administration, former academic
- Tech Comfort: Moderate to high—comfortable with dashboards and reports

Bio:

Dr. Chai oversees all dormitories. He's strategic and data-driven but lacks visibility into day-to-day operations. He makes decisions based on anecdotal evidence because there's no centralized data. He wants to improve efficiency but doesn't know where the biggest bottlenecks are.

Goals:

- Wants data-driven insights to optimize operations
- Needs to track maintenance response times and student satisfaction
- Wants to broadcast targeted announcements efficiently
- Needs to manage access control as staff roles change

Quote:

"ผมไม่รู้ว่ามีปัญหาใหญ่สุดคืออะไร แอร์เสีย? ประปารั่ว? ทำไมต้องเดินถามลุงสมชายทุกวัน ถึงจะรู้ว่าวันนี้เขาซ่อมอะไรอยู่"

("I don't know what our biggest problem is. Broken ACs? Leaking pipes? Why do I have to ask Uncle Somchai every day to find out what he's working on?")

User Research Insights

Key Research Findings

1. LINE is the Universal Channel

Finding: All user groups are already active on LINE daily.

- Students: 50+ messages/day, primary communication channel
- Staff: Use LINE groups for coordination, messaging students
- Admin: Use LINE for urgent communications

Implication:

- LINE Login reduces friction (no new passwords)
- LINE push notifications ensure visibility
- LINE Flex Messages enable rich, visual communication
- LIFF mini app provides seamless in-app experience

2. Communication is Fragmented

Finding: Information is scattered across multiple channels:

- Physical bulletin boards (easily missed)
- LINE groups (noisy, unstructured)
- Paper forms (lost, delayed)
- Word of mouth (inaccurate)

Implication:

- Centralized notification hub with unread counts
- Pinned announcements for critical information
- Targeted messaging by tags/buildings
- Push notifications for urgent updates

3. Status Anxiety is High

Finding: Students experience anxiety about:

- Was my request received?
- When will it be fixed?
- Did I miss a payment deadline?
- Am I doing this right?

Implication:

- Real-time status updates
- Transparent tracking (e.g., Received → In Progress → Completed)
- Proactive notifications (status changes, deadlines)
- Clear confirmation messages

Opportunity Areas

1. Unified Communication Hub

Opportunity: Replace scattered channels with a single, LINE-integrated platform.

Features:

- LINE Login (no new passwords)
- Centralized announcement feed
- Targeted messaging by tags
- Push notifications for urgent updates

Success Metric: Announcement read rate > 70%

2. Transparent Request Tracking

Opportunity: End the "black box" anxiety with real-time status updates.

Features:

- Visual status pipeline (Received → In Progress → Completed)
- Status change notifications
- Request history and details
- Estimated resolution time

Success Metric: Student satisfaction > 4.0/5.0

3. Mobile-First Staff Experience

Opportunity: Empower staff to manage tasks from anywhere in the dorm.

Features:

- Mobile-optimized ticket management
- Photo attachments for triage
- One-tap status updates
- Student profiles and history

Success Metric: Staff efficiency +50% (time reduction)

Summary & Recommendations

Top 3 Priorities

1. Unified Communication via LINE

- All users already active on LINE
- Reduce friction with LINE Login
- Push notifications ensure visibility
- Flex Messages enable visual engagement

2. Transparent Request Tracking

- End status anxiety for students
- Reduce follow-up calls for staff
- Provide visibility for admins
- Build trust through transparency

3. Mobile-First Staff Experience

- Empower staff to work from anywhere
- Reduce coordination overhead
- Increase response speed
- Improve student satisfaction

Design Principles

Based on user research, C-Madong should embody these principles:

- Where You Are: Meet users in LINE (no new app to download)
- Show, Don't Hide: Full transparency and status visibility
- Fast & Frictionless: Minimal steps, instant confirmations
- Visual First: Photos, Flex Messages, clear visual hierarchy
- Mobile Native: Optimized for smartphones, not desktop
- Bilingual Seamless: Thai/English toggle, culturally appropriate
- Forgiving: Undo, edit, clear next steps, no dead ends
- Human-Centered: Support chatbot, FAQ, how-to guides
